WHEREAS, the New Jersey Department of Environmental Protection (“DEP”) announced on December 5, 2022, a draft settlement with BASF Corporation in the matter of Ciba-Geigy Toms River Superfund Site

WHEREAS, following a full and thorough review of the New Jersey Department of Environmental Protection’s settlement agreement with BASF Corporation for damages to natural resources at the Ciba-Geigy Corp. site in Toms River Township, the Township Mayor and Council have voiced their opposition to the settlement and are calling for extensive modifications, and

WHEREAS, the Toms River Township Mayor and Council, in a strongly worded resolution to Gov. Murphy, DEP Commissioner Shawn M. LaTourette, area State Legislators and others, noted that the proposed settlement does not go far enough to hold BASF financially accountable for the still unhealed injuries their operations inflicted on the local environment, economy and public health, and

WHEREAS, the now defunct Ciba-Geigy Corp., and before that Toms River Chemical, whose parent company is now BASF, was responsible for the discharge of hazardous substances into the environment over the course of about five decades during the manufacture of dyes, pigments, resins, epoxy additives, and other operations at the approximately 1,255 acre site off Route 37 in Toms River Township, and

WHEREAS, according to Toms River Township, under the proposed settlement, BASF escapes paying any monetary penalties because the NJDEP surrendered any claims for statutory natural resource damages, which it first sought in a lawsuit purportedly instituted by the Attorney General in 2007, and

WHEREAS, Toms River Township is calling for a remaining 250 acres of the site or a significant portion thereof, to be deeded to the Township for perpetual preservation, so long as BASF remains responsible for the cost of ongoing remediation, and

WHEREAS, Toms River Township also is calling on the creation of a fund to be paid by BASF and administered by a trustee appointed by the Township to compensate victims of the cancer cluster, in addition to requiring an exhibit at the proposed environmental center on the property that would comprehensively document the damage the pollution caused to the environment, the health of residents, and the negative impact on the community which would be created and maintained by a committee of academics, environmentalists and residents and generously funded by BASF.

WHEREAS, along with the Township of Toms River, Save Barnegat Bay, a community based 501(c)(3) organization whose mission is to restore and protect the Barnegat Bay and its ecosystem, has also expressed serious concerns with both the DEP’s settlement process and substance.

NOW, THEREFORE, BE IT RESOLVED by the **BOARD OF COMMISSIONERS** of the **COUNTY OF OCEAN, STATE OF NEW JERSEY** supports the efforts of the Toms River Township Mayor and Council to have the proposed Ciba-Geigy settlement modified to provide greater benefits for all those directly affected whether with health impacts, economic impacts or environmental impacts.

4. To publish all monitoring information concerning the status of the Toms River, its surface waters, sediments, and adjacent wetlands from the border of Manchester Township to Barnegat Bay and the Atlantic Ocean and continue to monitor to the next three years.
5. To establish a public information plan to provide current and all future updated information regarding the status of all actions taken concerning the remediation of the site along with opportunity for public involvement.

NOTICE TO THE BAR

TRANSCRIPT FEES – INCREASES EFFECTIVE JULY 1, 2020

This notice is to advise that pursuant to N.J.S.A. 2B:7-4, per page fees for the production of transcripts have increased effective July 1, 2020.

Transcript fees are recalculated every five years on July 1 using a specific formula set forth in N.J.S.A. 2B:7-4(b) to reflect changes in the Consumer Price Index (CPI). The courts do not set transcript fees.

As of July 1, 2020, the fee for original standard delivery transcripts has increased from \$4.29 to \$4.68 for each page of an original and from \$0.72 to \$0.78 per page for copies. Expedited and daily transcript rates also have increased. The new fees are as follows:

	within 30 business days	\$4.68 per page	\$0.78 per page
	within 7 to 10 business days	\$7.02 per page	\$1.17 per page
	next business day	\$9.36 per page	\$1.56 per page

The fee increases apply to any "transcript of a stenographic record or other recording in any court or in any other proceeding recorded at the direction of the Supreme Court."

Updated information and estimated fee charts will be posted on the Appellate Division page of the Judiciary's public website.

Questions regarding transcript fees may be directed to Karen M. Carroll, Deputy Clerk for the Appellate Division, at Karen.Carroll@nycourts.gov or at 609-815-2950 ext. 54730.

WHEREAS, the dedicated \$25 million annual allocation for the New Jersey Shore Protection Fund has supported a unique and successful cost-sharing partnership with the federal government in replenishing eroded beaches along the 137-mile New Jersey coast from Middlesex to Cape May County and provides needed matching funds for the New Jersey Department of Environmental Protection's numerous other municipal coastal projects; and

WHEREAS, Ocean County is uniquely situated at the Jersey Shore with approximately 45 miles of coastline along the Atlantic Ocean; and

WHEREAS, Ocean County Board of Commissioners ("the Board") has consistently made shore protection a priority through its continuance of its annual beach grass and dune fencing distribution program; and

WHEREAS, Superstorm Sandy demonstrated the value of well-nourished wide beaches with dune systems in protecting life and property along the coast and preventing more extensive damage to critical infrastructure; and

WHEREAS, healthy beaches, coastal ocean front, and bayside shorelines fuel our State's economy, bringing in a projected \$44 billion in tourism revenue in 2022; and

WHEREAS, the State of New Jersey and the Army Corps of Engineers must expand their efforts beyond coastal beaches to include back bay shorelines; and

WHEREAS, the \$25 million allocated from the Shore Protection Fund will not be enough to meet current and anticipated future matching costs of Army Corps of Engineers and State replenishment projects and other needed coastal protection projects by the numerous coastal municipalities in New Jersey; and

WHEREAS, Assembly Bill 3535 and Senate Bill 2449 currently being reviewed by the State Legislature would increase the amount annually credited to the Shore Protection Fund to \$50 million.

NOW, THEREFORE BE IT RESOLVED, BY THE BOARD OF COMMISSIONERS OF THE COUNTY OF OCEAN, STATE OF NEW JERSEY that we encourage the New Jersey Legislature to pass legislation to increase funding for the dedicated New Jersey Shore Protection Fund to be used for future coastal protection projects and provide a further incentive for federal matching funds.

MANUFACTURER CERTIFICATIONS:

The body manufacturer must be an ISO 9001:2008 certified company and have a Fully Meets rating in the Ford Quality Vehicle Manufacturer Program.

BODY STRUCTURE:

Manufactured from all steel products, the floor, roof, side walls, rear wall, driver halo assembly and entry door assembly shall be all wire welded (MIG) together to form an integral steel frame that is thoroughly coated in a primer paint shop, then mounted with specified hardware to the OEM rubber body mount points (pucks) supplied by the chassis manufacturer. Once joined to the chassis, the bus finishing process shall begin.

A. Floor frame construction and assembly -

Cross Members -- The floor cross members form the base structural support for the rest of the frame components. Our cross members are constructed of 14-gauge steel, formed to a capital “C” shape. Cross members over the fuel tank are made to provide the clearance needed to conform with FMVSS301, and include formed internal reinforcements welded in place for additional strength. All additional longitudinal and latitudinal structure is flush welded in place to form a one-piece floor upon completion.

Steel “Hat Posts” – 1”x1”x4”x1”x1” shall run the length of the floor between cross members and are welded into place. This extremely strong form is used to weld our HSLA steel seat track in place.

Steel C Channel – 1”x1.5” C channel shall be welded in between cross members the full length of the floor in 5 places. Coupled with the Hat Posts this provides a one-piece strong “ladder” type frame for the flooring.

A. Floor frame construction and assembly - (CONT'D)

Seat Track – 12-gauge roll formed high strength/low alloy steel shall be wire welded in place for seat mounting down each side of the bus, with lengths predicated on the floor plan chosen. This is yet another stiffener in the extensive construction process.

Wheel Wells -- Constructed of 14-gauge steel, wheel wells shall also be welded in during the floor construction process. All seams in the wheel well shall be welded to create a one-piece water resistant wheel housing structure. The wheel wells shall also provide additional strength to the body assembly, when welded in place.

Structural steel Angle – 1/8" thick 1.5" x 2.5" structural steel angle shall be used the full perimeter length of each floor assembly, welded to the ends of all floor cross members. This provides not only a flat plane for joining the sidewall assembly, but also ties all cross members together and provides additional side impact resistance.

Additional structure – When adding vertical stanchions, wheel chair lifts and/or tie down options, additional structure shall be welded into the floor at locations required.

B. Sidewall Construction –

Sidewall vertical member – The heart of the sidewall shall be the vertical structure, a roll formed 18-gauge steel capital "C" channel with 8 bends that create extreme strength and rigidity. The vertical member shall be installed in full lengths between windows and in shorter sections above and below window frame centerlines. Additional vertical structure is used at both ends of the sidewall enabling the structure to withstand the forces applied by the vehicle when in motion. Using the open C member also enables a thorough primer application.

Steel Tubing – 1"x1" 16-gauge steel tubing shall be welded in horizontally between vertical members to frame in all window openings and 1"x3" 16 gauge steel tubing shall be welded in to frame all upper window openings. This adds front to rear reinforcement as well. The 3" wide steel tube shall supply a structural mounting surface for shoulder belt attachment which has been pull tested to federal standards.

Seat Track – High strength low alloy roll formed steel track shall be welded to each vertical sidewall member down each sidewall below the window frame. While serving as a seat attaching device, it shall add excellent structure to the sidewall and also add excellent side impact resistance.

Wheelchair Options – Additional sidewall tube structure shall be added to form the perimeter frame for mounting of the wheelchair door assembly.

Full length steel tubing – 1"x1" 16-gauge steel tubing shall be MIG welded to the sidewall bottom and top at each vertical member for attaching to the floor and roof sections, respectively.

ITEM #1 – MODEL YEAR 2023 OR NEWER, (12) AMBULATORY + (2) WHEELCHAIR POSITIONS MINI-BUS, AS SPECIFIED, OR EQUAL (CONT'D)

C. Rear Wall Construction –

Rear wall vertical member – The vertical sidewall capital “C” channel with 8 bends shall also be used in the rear wall assembly. Full length structure shall be used at varying places, with the inclusion of the rear door. Shorter cut pieces are used above the door.

Steel Tubing – 1”x1” 16-gauge steel tubing shall be welded horizontally between vertical members to provide an upper door frame in the rear wall assembly.

Full length steel tubing – 1”x1” 16-gauge steel tubing shall stitch welded to the rear wall top and bottom as in the sidewall assembly.

D. Roof Construction –

Roof Bows – Radius formed one-piece 16-gauge steel roof bows formed as a modified hat post design shall be placed on 16” centers for exceptional strength, eliminating the need for rollbars. They are then capped with top flat pieces from flange to flange to provide abundant surface area for securing the exterior roof material. Each bow shall be welded to the 1” tubing referenced below.

Steel Tubing – 1”x1” 16-gauge steel tubing shall be welded to the full perimeter of the roof for mating to the sidewall and rear wall, with short vertical pieces providing support on the front and rear ends. The 3” wide steel tube supplies a structural mounting surface for shoulder belt attachment and shall be pull tested to federal standards.

Steel Plate 3” wide shall be welded full length longitudinally on each side of the roof to provide further strength and stability to the roof structure.

Steel Plate of varying dimensions shall be welded into the roof structure between bows to provide mount points for items such as stanchions for secure mounting whenever the items are not place directly below a roof bow.

E. Driver Compartment Overhead Halo –

Steel Tubing – 1”x1” 16-gauge steel tubing is cut and jig welded into an integrated one-piece structure spanning from the front roof bow of the body to the newly cut roof line of the cab. Also created during the structure manufacture is the housing for mounting the electronic circuit board.

11 Gauge steel – shall be formed to make brackets used to mount to the chassis roof.

F. False Floor (Cab to body transition) –

Steel Tubing – 2” x2” (taller when needed) 16-gauge steel tubing shall be welded together forming a flat body floor transition from the step area back to the actual body area. An overhang on the curbside provides a secure attach point frontally for the entry door frame added later.

Structural steel angle – 11 gauge 1.5”x1.5” structural angle shall be added in short lengths five places to provide attachment points to the chassis floor.

G. Interior Vertical Transition Frames –

Steel Tubing – 1"x1" 16 gauge steel tubing shall be used vertically and a ladder type assembly shall be made welding the 1x 1 tube to .75"x.75" 11 gauge steel tube that is used horizontally in the assemblies. These pieces transition from the body fronts on each side to the driver halo side assembly and the entry door frame assembly on the curbside.

H. Entry Door & Step Assembly Frame –

Steel Tubing – 1"x1" 16 gauge and .75"x.75" 11 gauge horizontal steel tube shall be cut to length and welded together in a ladder type construction forming a rigid frame for attaching the entry door/step assembly.

I. Steel Entry Door/Step Assembly –

11 gauge steel – The step riser/tread piece shall be manufactured from one-piece 11-gauge galvanized steel and use 90° bends at all risers and treads. The bottom tread also adds an additional 90° bend for additional strength and safety. Upper and lower side pieces are then welded to the vertical tubing and step riser/tread.

J. Application of Exterior Painted Aluminum Sidewalls

Mill painted aluminum exterior sidewall panels are installed using a combination of very high bond tape with an acrylic adhesive and Manus Bond 75-UHVFC solvent and isocyanate-free structural adhesive. The side vertical wall bows have two flanges facing the exterior. Tape is applied to one vertical flange for fast adhesion while Manus 75-UHVFC structural adhesive is applied to the other vertical flange. The metal is put in place then pressure is applied by rollers to secure the metal to the tape and ensure good contact with the bead of structural adhesive.

FRP and composite sidewalls and skirts will NOT be acceptable.

As normal practice dictates, metal is overlapped moving up the sidewall for water shedding. The metal is then held in place initially by the VHB tape, then subsequently by window ring flanges and belt line molding that is secured with stainless steel fasteners. The structural adhesive “greens” (initial grab strength) within two hours, depending on temperature and humidity conditions, then moves to a full cure within a few days.

EXTERIOR LIGHTING:

LED thin-line rectangular front/rear clearance & marker lamps (5 front amber, 7 rear red), LED red stop/tail and turn signal/running lamps, LED back up lamps, LED license plate lamp. Two of the seven thin-line red lights are surface mounted on the rear skirt. The other five are installed in the rear cap recessed. An ada compliant surface mounted exterior entry door light shall be included.

A rectangular LED third brake light shall be installed on the upper rear cap of the bus.
